

Orphaned Wells RenuWell Solar Sites

Our latest two solar sites were facilitated through a partnership with the MD of Taber and Iron and Earth, Medicine Hat College, Sky Fire and Consultco, and the Orphan Well Association. The solar arrays, located in Barnwell and Fincastle, are part of an ongoing effort to repurpose two Orphaned Well Sites and convert them into micro generation Solar sites.

The RenuWell Solar Sites produce just over 1 megawatt each.

Funded by Alberta's Municipal Climate Change Action Centre (MCCAC) and Irrican, the RenuWell Pilot Project facilitates installation of solar farms on remediated oil and gas well sites, using existing maintenance roads and power lines to save costs.

The two Renuwell project sites were commissioned in the spring of 2023 and contributed \$226,000 in revenue for Irrican in 2023.
