

# SMRID 2025 NOTICE OF WEED CONTROL TREATMENTS

The St. Mary River Irrigation District will be controlling broadleaf weeds along its right of ways for the 2025 irrigation season. The district will use 2,4-D, Milestone, Dicamba and Glyphosate for weed control on driving banks and reed canary grass control along canals. This spray program will be starting in April of 2025 and will continue to the end of the irrigation season.

Also included in this weed control program will be the treatments for aquatic weeds. To control these aquatic weeds, the SMRID may be treating the canals as required and as noted below on a two- or three-week schedule for the 2025 irrigation season. Treatments cannot be completed consecutive weeks in an area. The canals will be treated with Magnacide H (Acrolein, stabilized) to control the growth of aquatic weeds and algae.
